THE REPLY FILED 04 September 2007 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.						
 The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must time ly file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee had been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce an earned patent term adjustment. See 37 CFR 1.704(b). 2. The Notice of Appeal was filed on A brief in compliance with 37 CFR 41.37 must be filed within two months of the date of filing the Notice of Appeal (37 CFR 41.37(a)), or any extension thereof (37 CFR 41.37(e)), to avoid dismissal of the appeal. Continuation of 11. does NOT place the application in condition for allowance because: Applicant has argued that both references teaches away from the use of a an invisible light flood light, however, the Examiner disagrees. First, only the sy stem of Kojima would be modified to add the invisible flood light and it would be obvious that an invisible light flood light could be substituted for estimating a reflection factor in an infrared region. Applicant also argued that Shigeo does not mention an invisible floodlight apparatus, however, Shigeo clearly teaches in [p][009] that the image pick-up detects both visible and infrared light. Thus it would have obvious that there has to be a source or means of infrared light so that the image pick-up can detect the reflected light. Moreover, Shiego clearly teaches that the obstruction detection apparatus can be installed on a car (see [p][001]).
